No. 3-2014/10 – dr

August 2010

What to do if it's raining cats and dogs and outdoor shooting is planned?

Imagine you have to go for an outdoor film and broadcast shooting, it is pouring down andit does not harm your equipment at all. You need not waste time building a rain protection for your equipment. Only a dream ? No, this is now reality with the new weather-resistant daylight lamp series of kobold and the matching ballast units.

How is this just possible ? It's simple: The new HMI lights DW 200, DW 400 as well as the DW 575 and DW 800 are **weatherproof conforming to IP 54 standard and therefore guarantee for maximum safety for the shooting team on the scene!** This is outstanding and ideal in extreme weather conditions - with its super-solid construction, compact dimensions and **maximum reliability**. The ignition unit is waterproof and ensures both cold and hot starts even in a humid environment.

Also the matching ballast units EWB 200, EWB 400-575 and EWB 400-575-800 do not leave you standing in the rain. **Small, smart and weighing only 1.7 or 2.6 kilos**, the units offer you high safety conforming to IP 43 standard. And also if ambient temperatures become really hot, the units work reliably as ever - thanks to the innovative temperature management system, the device switches in an emergency operation mode of operation in ambient temperature allows up to 60 °C !

With the kobold lighting equipment you are always showered in safety. You, too, are invited to make use of the many advantages. Please ask for a **free demonstration or test equipment** from your kobold distributor nearby.

For more information please contact the kobold dealer in your country or visit us on www.bron-kobold.com
